‘Sam’ CASHING IN

The label is printed on a computer and contains a person’s name, address, and social security number, which a taxpayer can return to this label with the label.

The information on the label is then sent to a company that makes the label. The company makes the label and sends it to the Internal Revenue Service (IRS) to be used for tax purposes.

The IRS uses the label to match it with the taxpayer’s return. The label is then destroyed, and the taxpayer’s return is processed.

The IRS will not use the label again, and it is not allowed to be used for any other purpose.

New Chamberlain Big Bad Bully!

By Dick Kramer

Richard Chamberlain has changed. The innocent-eyed, squeaky-voiced, every-man-next-door actor who once played the role of Dr. Kildare in "Dr. Kildare" is now a big bad bully. The star of the new television series "Dr. Kildare" is a terrifying character, a ruthless, manipulative, and狠心的 doctor who uses his power to control and manipulate others.

Chamberlain, who previously starred in the hit television series "Love, American Style," has undergone a radical transformation for his new role. He now portrays a power-hungry, callous, and ruthless character who is willing to do whatever it takes to get what he wants.

The character's change is evident in the series, where Chamberlain's Dr. Kildare is shown to be a man of two minds. On one hand, he is a kind and compassionate doctor who cares deeply for his patients. On the other hand, he is a cold and calculating individual who will stop at nothing to achieve his goals.

Despite his change in character, Chamberlain remains a talented actor who brings depth and nuance to his performance. His portrayal of Dr. Kildare is a testament to his ability to adapt to different roles and bring new life to classic characters.

In an interview with the Los Angeles Times, Chamberlain spoke about his new role: "I really wanted to do something different. I wanted to play a character that was really challenging and would take me out of my comfort zone. Dr. Kildare is a really interesting character, and I think I can bring something new to his story."

CBS Examines Warren Report

Salant Silent on Findings

By JOAN CROSS
New York—The recent release of the Warren Report, which was expected to provide a comprehensive analysis of the assassination of President John F. Kennedy, has not been accompanied by a statement from the Salant Corporation, the company that conducted the survey.

The report, which was released on November 22, 1966, by the Warren Commission, was expected to provide insights into the circumstances surrounding the assassination. However, the Salant Corporation, which conducted the survey, has not issued a statement regarding the findings of the report.

Despite the lack of a statement from Salant, the survey was widely regarded as a key component of the investigation into the assassination. The survey was conducted in the aftermath of the assassination and was intended to provide a comprehensive analysis of the public's perceptions of the event.

When the survey was released, it was met with widespread interest and was widely regarded as a key component of the investigation. However, the lack of a statement from Salant has raised questions about the company's role in the investigation.

Salant's silence has been particularly notable given the company's role in the investigation. The company was hired by the Warren Commission to conduct a survey of public opinion regarding the assassination.

Richard Salant

"I made a personal decision not to comment on the Warren Report. I don't think it's appropriate for me to comment on a report that has been released by the government. I believe that the government should make its own decisions regarding the release of information."

Fertilize Your Lawn

Pawdocary Miuexewr Attacking Roses

Green Thumb Guide

How much Fertilizer Do You Use?

How do you fertilize plants? If you are fertilizing plants too often, you may be losing out on nutrients. Fertilizer is a natural substance that contains nutrients that are essential for plant growth. The amount of fertilizer you use depends on the type of plant you are fertilizing and the conditions in your garden. Over-fertilizing plants can lead to problems such as stunted growth, leaf burn, and reduced yields.

In this article, we will discuss the different types of fertilizer available and how to determine the right amount to use. We will also provide tips on how to fertilize plants correctly and avoid common mistakes. Whether you are a seasoned gardener or a beginner, this article will help you get the most out of your plants and create a healthy garden.

How to choose the right fertilizer for your plants?

Before choosing the right fertilizer for your plants, it is important to understand the nutrients that are needed for healthy growth. Plants require several essential nutrients, including nitrogen, phosphorus, and potassium. The proper balance of these nutrients is crucial for optimal growth and development.

Nitrogen is the most important nutrient for plant growth. It is needed for the production of chlorophyll, which is necessary for photosynthesis. Phosphorus is essential for flower development and seed production. Potassium is important for the formation of cell walls and for the transport of nutrients within the plant.

Choosing the right fertilizer:

There are several types of fertilizers available, including granular, liquid, and organic. Each type has its own advantages and disadvantages. Granular fertilizers are easy to apply and are effective for long periods, but they may not be as concentrated as liquid fertilizers. Liquid fertilizers are more concentrated and can be applied more frequently, but they may be more expensive and require more labor.

Organic fertilizers are made from natural materials and are environmentally friendly. They provide a slow and steady release of nutrients to the plant, which helps to promote healthy growth. However, organic fertilizers may not be as effective as synthetic fertilizers in the short term.

Choosing the right fertilizer for your plants:

The type of fertilizer you choose will depend on the type of plant you have and the growing conditions. For example, nitrogen is the most important nutrient for the growth of most plants, including vegetables, fruits, and flowers. Phosphorus is important for flower development and seed production, while potassium is necessary for the formation of cell walls and the transport of nutrients.

In conclusion, choosing the right fertilizer for your plants is crucial for healthy growth and development. Understanding the nutrients that are needed for healthy growth and choosing the right fertilizer can help you achieve the best results in your garden. Whether you are a seasoned gardener or a beginner, this article will help you get the most out of your plants and create a healthy garden.
PR Man Says Beatles Are Dead!

By DICK TAYLOR

The Beatles, the four-man pop music sensation that has captured the imagination of millions of fans worldwide, is dead, according to a statement made by public relations manager Dick Taylor. In a press conference today, Taylor said that the band had decided to disband after a series of internal conflicts and creative differences.

Taylor, who has been with the Beatles since their early days, said that the band members had reached a point where they could no longer work together. He cited a series of tours and recording sessions that had put a strain on their relationships, as well as creative differences over the direction of their music.

"It's been a tough decision," Taylor said. "But we've all come to the realization that we can no longer work together in a meaningful way. It's been difficult, but we feel that it's the best thing for the band and for our fans."
