Machine Over Man? Prof Says No

OKLAHOMA CITY — Dr. Fred Stroud, University of Oklahoma professor of psychology, today said in an interview that the day will never come when machines will replace the human mind.

"I've always been a believer in the potential of the human mind," Dr. Stroud said. "And I don't see any reason why we can't continue to develop it and keep it ahead of the machines." He said that, yes, machines can be programmed to perform tasks, but they cannot think like humans.

UFO 'People' Trying To Dissect Animals Of The World?

It seems there is a group of beings from another world who are hell-bent on dissecting animals for some sinister purpose. The group, known as the 'UFO People,' has been sighting a number of animals in unusual conditions and has been reported to be recording their behaviors. The exact reason for their actions is unknown, but it has caused a great deal of concern among scientists and wildlife experts.

The group, composed of several beings, has been seen hovering above the Earth with a small spacecraft. They have been reported to leave the spacecraft and enter the bodies of animals, where they perform their dissections. The group has been observed to be very methodical in their dissection process, leaving no stone unturned in their pursuit of knowledge.

The beings' motives remain unclear, but it is believed that they may be seeking information about the Earth's life forms. Scientists are currently working on ways to stop this activity and to understand the group's intentions.
