Measure Of Disarray

It is a matter of fact that almost all the major newspapers have called for the resignation of President Nixon. The scope of the Watergate investigation is rapidly increasing. The first prosecution papers are being turned over to the grand jury. If Nixon does not resign, the only way to remove him from office is impeachment. The American people are extremely frustrated by the events of the past weeks. The President's actions have been rash and unwise. The country needs a new president, and it needs him now.

The PEOPLE'S Voice

Solution

In the moral climate today, it is difficult to find a solution that is both practical and ethical. The President's actions have caused much controversy. The solution must be one that addresses the moral and ethical issues. A solution that considers the interests of all Americans is necessary. The President must take responsibility and make the right choices.

Paul Harvey

From Pennsylvania

No

Just because the President is Presbyterian, it does not mean that voting for Watergate is a moral decision. The President has made many mistakes. It is not enough to simply vote against Watergate. We need to vote for what is right and just.

Disbelieving Nixon

The President's actions have been questionable. It is clear that he has committed many wrongdoings. The people of America deserve better. The President must resign or face impeachment. The country needs a new leader.

Watergate's Inconceivability

While the President's actions have been questionable, it is important to remember that we live in a world of politics. The political climate is complex, and it is difficult to make moral judgments in this context. The President has made many wrongdoings. It is important to hold him accountable for his actions.

N-P-K Are Big Three Ingredients For Fertility In Your Garden

By CAROLYN SPENCER

N-P-K are the three most important ingredients for fertility in your garden, according to experts.

Nitrogen (N) is essential for plant growth, especially for leafy greens and vegetables. Phosphorus (P) is crucial for root development and flower formation. Potassium (K) is important for overall plant health and stress resistance.

Experts recommend using a fertilizer containing N-P-K in a ratio of 1:1:1 for optimal plant growth. This ratio can be adjusted based on the specific needs of your garden.
