Nothing Regular About Mixed-Gas Prices

By DON SMUCKER
Northwest Business Editor

Gasoline prices have zoomed over 20 cents in Oklahoma City, further alarming an already nervous public about its ability to afford the rising cost of living. Although regular gasoline, full-service, has gone up from $1.50 to $1.70 a gallon, the major service stations are still holding their prices at $1.50.

But the increase is typical of the service stations, and the major change in the price structure is due to the fact that many service stations are holding their prices at $1.50. The differential between the two prices is not as significant as the difference in price between the two stations, and the major service stations are still holding their prices at $1.50.

The Independent News (opposite) is now selling regular gasoline at $1.50, and the major service stations are still holding their prices at $1.50. The differential between the two prices is not as significant as the difference in price between the two stations, and the major service stations are still holding their prices at $1.50.

Belfast Rail Station Bombed

BELFAST, NORTHERN IRELAND (UPI) — Belfast's biggest bomb has exploded at the rail station here.

The blast occurred about 9:30 a.m. local time, damaging the station and causing widespread damage to nearby buildings.

The bomb was described as being a large device, possibly explosive, and it caused widespread damage to the station and nearby buildings.

There was an appeal for witnesses to the explosion.

In a separate action, a bomb was also reported to have exploded in the nearby town of Derry, also causing damage to buildings and injuries to several people.

The explosions have occurred in a series of attacks on public buildings and transport systems in Northern Ireland, as tensions escalate between Protestant and Catholic communities.
